## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1, 2, 4-8 and 10-13, drawn to a method of screening the suppressive effects of a nucleic acid on a disorder that accompanies cell death.

Group II, claim(s) 1, 3-7 and 9-13, drawn to a method of screening the suppressive effects of a protein on a disorder that accompanies cell death.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The special technical feature of Group I is the ability to discern whether or not a nucleic acid has the ability to suppress a defect when provided to cells having a disorder associated with cell death.

The special technical feature of Group II is the ability to discern whether or not a polypeptide has the ability to suppress a defect when provided to cells having a disorder associated with cell death. This special technical feature is different from the special technical feature of Group I because of the molecule that is being administered, a nucleic acid versus a protein. Not only are nucleic acids and proteins chemically, structurally and functionally distinct (e.g., a protein is comprised of amino acids whereas a nucleic acid is comprised of nucleic acids), the methods for delivering nucleic acids to a cell are different than those of delivering proteins to a cell.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
